

iPad Air Play Mirroring Instructions

1. Make sure the TV is on
2. Wake up/turn on the Apple box by using the Apple remote (Apple remote should be by the TV, but might be in the podium cabinet)
3. Make sure you are on the correct HDMI channel that the Apple box is plugged into
4. The TV should reflect that it is ready to receive info, but if not, then press Input on the TV until the TV reflects Apple instructions

5. Open the iPad cover
6. Push the round button the bottom to pull up the passcode screen
7. The passcode is the 4 digit code that is on the cover
8. Take your finger and swipe up from the bottom of the iPad screen to make a menu bar appear
9. Press the Air Play Mirroring button on the menu bar
10. Wait for the Apple TV room boxes to show up and click the one that has your room number on it
11. A passcode should now appear on the actual TV
12. Enter the TV's passcode into the iPad and your iPad screen should now be mirrored on to the TV screen

Trouble Shooting:

- Unplug the Apple box from the TV and plug it back in
- Check the iPad's WIFI to make sure it is connected to St. Ann's Public or Private or Private 5G
- If an app is not playing, it may be that you need to start the app BEFORE mirroring it to the TV screen, so you may need to unplug items and start the app first and then do steps 1-12 again
